

# GREEN MANUFACTURING MADE IN FRANCE

March 13th | 10:50 - 13:00

Smart Manufacturing Summit @Aichi Sky Expo  
"International Agora" Stage  
English-Japanese (simultaneous translation)

In an era marked by rapid technological changes and growing environmental concerns, the pursuit of sustainable and green manufacturing practices has become a priority for industries worldwide.

French expertise and solutions in green manufacturing are not always known in Japan, despite the presence of about 15 French companies with production facilities and R&D centers in the country.

France stands at the forefront of discussions on green manufacturing, and this seminar aims to shed light on this excellence. In addition, we seek to encourage Japanese industrial decision makers to engage in collaborative endeavors with French companies in Japan, fostering cooperations and knowledge exchange.

**10:50 - 11:00** Opening Remarks by **Philippe Setton**, French Ambassador to Japan  
Video message from **Roland Lescure**, Minister delegate for Industry

**11:00 - 11:50** **Panel 1** - What is 'green manufacturing made in France' and how French industrial subsidiaries in Japan tackle sustainability challenges through innovative solutions.

**11:50 - 12:00** Keynote Speech – **Misae HASHIDA**, Dassault Systèmes

**12:00 - 13:00** **Panel 2** - Complementarity of French and Japanese activities in green manufacturing, and how groups from both countries can work hand in hand to enhance their solutions.
